Documentation Location Service: Whirlpool Top Load Washer WTW5000DW1 Service Manual Format:PDF Document Language:English Commission: \$9.95 Looking for Owner's Guide/User Guide? It is most likely available, but is not yet listed. Send us a message and we'll be looking for it for you. Did you know that many appliances of the same name are produced by different manufacturers? For example, many Kenmore dishwashers are made by Whirlpool and Frigidaire, and some Maytag dishwashers were manufactured by Samsung. Service and repair manuals often refer to the original basic model before it was rebranded. Have you paid yet? Get your documentation here. Describe the repair problem you have. What is Whirlpool Top Load Washer WTW5000DW1 performance tubs? In our database we do not yet have the capacity of the bath for this model, but we can try to investigate it for you, please send us a message with your request. This is a geometric method for calculating the capacity of the tub based on the cylinder volume formula. Unfortunately, the value could be as much as 25% of the discount from the manufacturer who specified the capacity. For? Because the tub isn't exactly a gas cylinder. The edge where the bottom is connected to the wall is not at an angle of 90 degrees, but smooth and rounded. The waterline is not clearly marked and the bottom is not always flat. Finally, the agitator also takes the capacity away from the tub. This method can be used as a rough estimate, but we do not recommend that you use it for comparison when shopping for a new pad. Determine the capacity of the tub for superior load by taking two simple measurements: 1. Use the ruler to measure the depth of the tub (marked with a red line on the diagram) 2. Now look for the distance across the tub, diameter (green line on the diagram). Note that some of the tubs are narrow on the opening. In this case, take measurements inside the tub. Depth of the tub: in. Diameter of the tub: v. The capacity of the Whirlpool Top Load WTW5000DW1 tub is ... cubic feet. The vat volume calculator provides the result of doe cubic feet, which are CONVENTIONAL, i.m. normal cubic foot. Manufacturers of the front loading device prefer to use cubic feet of IEC in their specification. The IEC capacity in the front loader is equivalent to the size of the high-end loader's washing machine and usually results in a larger number. For example, a capacity of 4.7 cu. ft EC is ed in 4.1 conventional cu for some undersopping. ft and in 4.2 cu. ft for others. There is no simple multiplier that can be used for an IEC value to stream it to DOE performance. When ordering an alternate number, make sure to use the manufacturer's part number.
